

SAVE METAL FINISHING

IN CALIFORNIA

Join Our Efforts. Contribute Today.

The California Air Resources Board (CARB) has proposed to phase out **Decorative Hex Chrome** by 2024, **Hard Chrome** by 2028 and **Chromic Acid Anodize** by 2033.

California Metal Finishers will no longer be able to provide this vital service to our industry. **Over one hundred thousand jobs could be lost** and the surface finishing industry could exit California in the coming years. This ban is not needed. Technology has allowed us to reduce emissions by over 99%. The surface finishing industry in California is less than half of 1% of hex chrome emissions yet is the only industry facing a ban. CARB can adopt SCAQMD Rule 1469 statewide as a compromise.

We are asking that you please consider contributing to our IEF Fund to help in our efforts to save the surface finishing industry in California. Your contribution is deductible on 501C Rules. Below is a mail-in donation form or a link to donate online if you would like to contribute. All money raised will go to fighting this massive regulatory overreach by CARB.

"This is as damaging as it gets."
~ Bryan Leiker, MFACA Executive Director

"It's going to knock the industry out of California."
~ Justin Guzman, MFASC President

"We need everyone's help in our effort to save the surface finishing industry in California." ~ Bobbi Burns, MFANC President

Without surface finishing we face not being able to:

Land an Airplane Safely

Corrosion and pitting will cause landing gears to collapse on contact if not treated correctly.

Stop an Automobile in Time

Brake components need meticulous surface coating specifications to prevent failures.

Defend a Nation and its People

Rust and Corrosion can cripple equipment and supplies that are needed by Military units.

Secure Vital Technology Components

Computers, phones and other telecommunication equipment will fail with substandard coatings.
