

ANNUAL WASTE MINIMIZATION CERTIFICATION

Facility: _____

“I certify that there is a waste minimization program in place at this facility to reduce the volume, quantity and toxicity of waste generated to the degree I have determined to be economically practicable and that I have selected the practicable method of treatment, storage, or disposal currently available to me which minimizes the present and future threat to human health and the environment. This waste minimization program meets all of the following requirements:

- 1. The waste minimization program addresses each hazardous waste stream identified pursuant to section 67100.5(h), Title 22 of the California Code of Regulations.*
- 2. The waste minimization program addresses the source reduction approaches specified in section 67100.5(j), Title 22 of the California Code of Regulations.*
- 3. The waste minimization program clearly sets forth the measures to be taken with respect to each hazardous waste stream for which source reduction has been found to be technically feasible and economically practicable, with timetables for making reasonable and measurable progress, and documents the rationale for rejecting available source reduction measures.*
- 4. The waste minimization program does not merely shift hazardous waste from one environmental medium to another environmental medium by increasing emissions or discharges to air, water, or land.”*
